Coffee Maker
SF-704

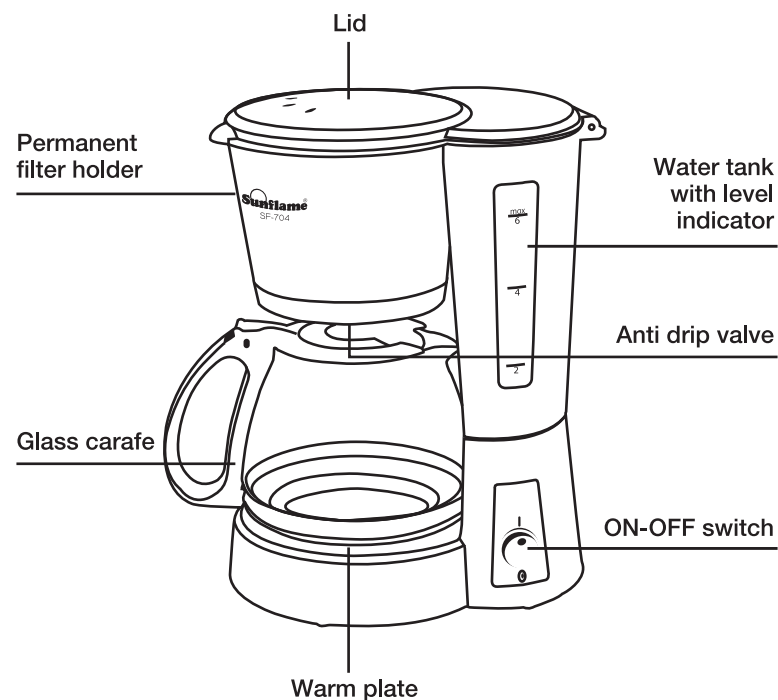

Please read all instructions carefully before using

IMPORTANT SAFEGUARDS

Before using the electrical appliance, the following basic precautions should always be followed including the following:

1. Before using it, check that the voltage of wall outlet corresponds to a coffee maker rating plate.
2. The appliance must be earthed.
3. Close supervision is necessary when your appliance is being used near children.
4. Do not place the coffee maker on hot surfaces or beside fire, in order to avoid damages.
5. Remove plug from the wall outlet before cleaning and when not in use. Allow the appliance to cool down completely before taking off components or before cleaning.
6. Do not operate any appliance with a damaged cord or plug or after the appliance malfunctions, or it is dropped or damaged in any manner. Return appliance to the nearest authorized service facility for examination, repair or electrical or mechanical adjustment.
7. The use of accessory which is not recommended by the manufacturer may cause injury to persons or damage to the appliance.
8. Place appliance on flat surface or table, do not hang its power cord over the edge of the table or counter.
9. Ensure that the power cord does not touch hot surfaces of the appliance.
10. Some parts of appliance are hot when operated, so do not touch with hand directly.
11. Do not immerse the appliance or power cord into water or any other liquids.
12. Never leave the empty carafe on the warm plate, otherwise the carafe is liable to crack.

TROUBLESHOOTING

Symptom	Cause	Corrections
Carafe leakage or water leaks out from lid of jug	The jug is not located properly	Let centerline of jug align with opening of funnel well.
The coffee drips too slowly or overflows from the edge of removable funnel	Coffee powder is too fine or coarse.	Use coarser coffee powder.
	Nylon filter too dirty	Clean nylon filter with clear water.
Coffee residue in jug	The filter is blocked	Clean filter
	Coffee powder is too fine.	Choose coarser coffee powder.
Water leaks from the bottom of the coffee maker.	Tank leakage or internal loose connection	Do not use the coffee maker again, contact with certified serving center.
The coffee maker cannot work any more.	The coffee maker gets heated abnormally, which causes its automatic safety protective system to be activated.	The coffee maker should be able to rework after keeping it in OFF position for two minutes, otherwise contact with certified serving center.
	Lack of water	Fill enough water

Do not take apart the appliance by yourself if the cause of failure is not found, you had better contact certified serving center.

13. Do not use outdoors.

14. This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning the use of the appliance by a person responsible for their safety.

15. Children should be supervised to sure that they do not play with the appliance.

16. If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.

17. Save these instruction booklets for future reference.

HOUSEHOLD USE ONLY

BEFORE THE FIRST USE

To ensure the first cup of coffee tastes excellent, you should rinse the coffee maker with warm water as follows:

1. Pour 600 ml water into water tank.
2. Set Nylon Filter in the funnel (add no coffee ground), then replace the water tank cover.
3. Place drip carafe on keeping warm plate and cup on removable shelf.

MAKE DRIP COFFEE

1. Open the water tank cover, pour proper drinking water into water tank according to the mark in the tank.
2. Add ground coffee to Nylon Filter with measuring spoon, a spoon ground coffee power can make a cup of top-grade coffee, but you can adjust according to the taste yourself.
3. Set nylon mesh into the funnel.
4. Push drip carafe on keeping warm plate, due care should be taken to ensure center alignment of carafe with that of funnel.
5. Press ON /OFF switch, the red indicator will be illuminated and coffee will start to drip out automatically after a while. Note: during operation, at any time, you can take out the carafe to serve, but the time cannot exceed 30 seconds, otherwise the coffee may overflow from the edge of funnel.
6. The coffee maker will turn to keeping warm mode if brewing coffee is finished. At the time you can cut off power.

WARNING: Do not leave the coffee maker unattended during making the coffee, as you need to operate manually sometimes!

CLEANING & MAINTENANCE:

1. Cut off the power source and let the coffee maker cool down completely before cleaning.
2. Clean housing of coffee maker with moisture-proof sponge often and clean water tank, drip tray and removable shelf regularly then dry them.

Note: Do not clean with alcohol or solvent cleanser. Never immerse the housing in water for cleaning.
3. Remove the filter by holding the small handle provided on it and carefully dispose off coffee residue as it might be hot/warm. Clean it with cleanser and rinse it thoroughly with clear water.
4. Clean all the attachments with water and dry thoroughly.

CLEANING MINERAL DEPOSITS

To keep your coffee maker operating efficiently, you should clean away the mineral deposits left by the water every three months or according to the water quality in your area and the frequency of use. Follow the instructions: Fill the carafe with one part of white vinegar and three parts of cold water, pour the water and vinegar mixture into the tank, do not place coffee ground, brewing the water-vinegar solution as per "Before the first use" instructions, repeat it until no yellow liquid comes out, if necessary, repeat the process. Then drain out the mixture, brew with fresh tap water until no vinegar odor is left.
